

KARTIK SONI

Full-Stack Engineer & ML Practitioner

+91 9880767146 · ks.amherst1@gmail.com · kartiksoni.vercel.app · [github/kartik-soni](https://github.com/kartik-soni) · Bangalore, India

TECHNICAL SKILLS

AI / ML	PyTorch · TensorFlow/Keras · Transformers · HuggingFace · LLMs · Fine-tuning · CNNs · NLP · Computer Vision OpenCV · Naïve Bayes · Cross-validation · Hyperparameter Tuning
Backend	Spring Boot · Java · Python · Django · Node.js · REST APIs · Redis · Microservices · JUnit · Mockito · Swagger
Frontend	Angular · React.js · TypeScript · JavaScript · HTML/CSS · MVVM · Lazy Loading · Reactive Forms
DevOps / Infra	Kubernetes · Docker · GKE · Helm · CI/CD · Jenkins · NGINX · GitHub Actions · PostgreSQL · MongoDB
Practices	System Design · HLD/LLD · Agile/Scrum · Design Patterns · Code Review · Technical Documentation

EXPERIENCE

Software Engineer (Full-Stack, Engineering Lead) · [Whova](#) Bangalore, India | June 2023 – May 2026

- Appointed Engineering Lead for end-to-end product shipment - owned POC coding, MVP scoping, Epic estimation, stakeholder communication, and cross-team delivery for an event management platform serving large-scale bookings.
- Re-architected a high-traffic Angular web app with MVVM, lazy loading to reduce initial load time (from 5 to 2 seconds), OnPush change detection to improve runtime performance significantly.
- Benchmarked Django vs. Spring Boot for new backend microservices using k6; identified Spring Boot's thread-pool model as better for concurrency despite higher baseline resource use, driving the architecture decision.
- Modernised legacy Java monolith into Spring Boot microservices; documented all RESTful APIs with Swagger and achieved >90% unit-test coverage with JUnit and Mockito.
- Containerised and deployed services on Google Kubernetes Engine; authored deployment, service, and virtual-service manifests, cutting release friction for a multi-service stack.
- Recognised as Employee of the Month for engineering innovation; mentored 3 interns through onboarding, Agile practices, and project bootstrapping.

ML Researcher · [UMass Amherst - Prof. Jaime Davila](#) Amherst, MA | Feb 2023 – May 2023

- Designed and trained CNN architectures for medical image classification (disease detection) on datasets of 4 000 – 13 000 images, iterating on kernel sizes, depth, and regularisation to combat overfitting.
- Applied 4-fold cross-validation and systematic hyperparameter search (learning rate, depth, optimiser), switching to SGD and achieving a final F1 score of 91%.
- Improved dataset quality by sourcing diverse, well-distributed images and applying augmentation (rotations, flips, brightness/contrast shifts), boosting generalisation on held-out sets.

Teaching Assistant - Systems Programming · [UMass Amherst](#) Amherst, MA | Sep 2022 – May 2023

- Supported 100+ students on concurrency, synchronisation, pointers, dynamic memory, and control flow; designed assignments and labs that consistently received positive feedback.

Software Engineer Intern · [ISO New England](#) Holyoke, MA | Jun 2022 – Aug 2022

- Migrated a legacy C++ application to a Spring Boot Java microservice; added JWT-based auth, role-based access, and Redis caching, reducing average API latency noticeably.
- Integrated SLF4J + Sentry for structured error logging; applied Lombok and SonarLint to raise code quality; scheduled automated emails via SendGrid cron jobs.

PROJECTS

LLM Domain Adaptation & RAG Pipeline · Python · HuggingFace Transformers · LangChain · FAISS

- Fine-tuned an open-source transformer (LLaMA / Mistral) using LoRA/QLoRA for domain-specific Q&A; reduced hallucination rate and improved answer relevance on domain benchmarks.
- Built a retrieval-augmented generation (RAG) pipeline with LangChain and FAISS vector store for document-grounded responses, enabling accurate answers over private knowledge bases.
- Evaluated outputs with BLEU, ROUGE, and human-preference scores; optimised prompt templates and chunk-size strategies to balance latency and accuracy.

Scalable CI/CD Deployment with Kubernetes · GKE · Helm · kubectl · Jenkins

- Migrated CI/CD pipelines from static VMs to GKE, doubling concurrent deployment throughput and cutting monthly cloud spend from ~\$600 to ~\$300 (50% reduction).
- Managed full Kubernetes stack: deployments, services, ConfigMaps, Secrets, RBAC, Ingress, namespaces, and persistent volumes, all templated with Helm for environment-specific configuration.

Smart Home IoT System · Raspberry Pi · Python · Node.js · Angular · Supabase PostgreSQL

- Built a Raspberry Pi temperature/humidity monitor (DHT11) with sensor data streamed to Supabase PostgreSQL via a Node.js API; deployed Angular dashboard on Vercel for real-time room visualisation and remote relay control.
- Added Pi-hole DNS-level ad blocking and relay-based scheduled lighting control, demonstrating edge AI/IoT system design end-to-end.

Real-Time Mask Detection (CNN) · TensorFlow · Keras · OpenCV · Python

- Trained a CNN on a manually labelled, augmented dataset (rotations, flips, brightness/contrast shifts, zoom) to achieve 92% real-time mask-detection accuracy.
- Deployed as an open-source initiative during COVID using OpenCV for live video inference; contributed to public safety tooling adopted by multiple organisations.

NLP Spam Filter · Python · NLTK · Naïve Bayes · Scikit-learn

- Built an SMS/email spam classifier using NLP pre-processing (tokenisation, stemming, TF-IDF) and a Naïve Bayes model; reached an F1 score of 87% on unseen data.

EDUCATION

B.S. Computer Science with Honors · GPA 3.9/4.0 Aug 2019 – May 2023

[University of Massachusetts Amherst](#)

Relevant: AI · Machine Learning · Computer Vision · NLP · Search Engines · Algorithms for Data Science · Reasoning Under Uncertainty · Systems Programming · OS · Networks · Software Engineering

AWARDS & RECOGNITION

Cum Laude · Dean's List (multiple semesters) · Bay State Scholarship (Masters) · Employee of the Month @ Whova
